## Audit Summary

Revoluzion have conduct a comprehensive analysis of the smart contract deployed 0x957Ad268E163C34Fb3a550FE7FC63BD678b1BceE, we are pleased to confirm its low level of security and functionality. The contract has undergone verification on BscScan, demonstrating transparency and code integrity. It avoids risky elements such as unsafe modules, minting or blacklist functions, upgradeable or proxy functions, and disruptive pausable features.

However, the design and logic structure of the contract may lack reliability and stability. The contract does not have a built-in mechanism to limit taxation or max adjustment on tax rates. Enabling trade may trigger the tax to execute, but disabling it does not execute the tax. To ensure the safety and performance of the contract, it is crucial to conduct regular audits and maintain ongoing vigilance. If you have any further inquiries or require additional support, please don't hesitate to contact us.

## Project Description
