Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

CLUB250CENT is a crowdfunding cum digital cryptocurrency investment platform designed to make network marketing a real life career. It sub-divided into the classic and the premium plans.

Project Engagement

During the 26th of June 2022, **C250Gold Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Contract Link v1.0

- Github
 - <https://github.com/ademuanthony/c250gold/blob/main/contracts/C250Gold.sol>
 - Commit: 1199bc0f5e44773dacc9a1f6dadcc1d52a232901

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts/access/Ownable.sol	1
@openzeppelin/contracts/math/SafeMath.sol	1
@openzeppelin/contracts/token/ERC20/ERC20.sol	1
@openzeppelin/contracts/token/ERC20/IERC20.sol	1
@openzeppelin/contracts/utils/ReentrancyGuard.sol	1
@uniswap/v3-core/contracts/interfaces/IUniswapV3Factory.sol	1
@uniswap/v3-core/contracts/interfaces/IUniswapV3Pool.sol	2
@uniswap/v3-periphery/contracts/libraries/OracleLibrary.sol	1

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/TimeProvider.sol	01b521b353d699b11c6780b4778c2ad4881d0d9d
contracts/C250PriceOracle.sol	f966c6a4ea7f6d1d61b6f94687b30bde34c11a54
contracts/c250gold.sol	3f6c57f3f16f0cdb8c0623ce261c6f195b661594

CallGraph v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

Correct implementation of Token standard

ERC20				
Function	Description	Exist	Tested	Verified
TotalSupply	Provides information about the total token supply	✓	✓	✓
BalanceOf	Provides account balance of the owner's account	✓	✓	✓
Transfer	Executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	Executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	Allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	Returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

```
createUsdcPool
setPriceOracle
setTreasuryWallet
launch
changeWallet
creatChangeWalletRequest
deleteChangeWalletRequest
approveChangeWalletRequest
processChangeWalletRequest
register
addAccount
activate
registerAndActivate
addAndActivateMultipleAccounts
importClassicAccount
withdraw
upgradeToPremium
setMaxtraversalDept
importPart1LagacyMatrix

renounceOwnership
transferOwnership
transfer
approve
transferFrom
increaseAllowance
decreaseAllowance
```

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✓
Max / Total Supply	250000		

Comments:

v1.0

- Tokens will be minted in
 - upgradeToPremium function
 - sendPayout function
 - activate function

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- Tokens
 - will be burned while
 - activate function
 - upgradeToPremium function

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	🚩
Unverified / Not checked	✗
Not available	—

Modifiers and public functions

v1.0

```
✓ 🔹 createUsdcPool
  Ⓜ onlyOwner
✓ 🔹 setPriceOracle
  Ⓜ onlyOwner
✓ 🔹 setTreasuryWallet
  Ⓜ onlyOwner
✓ 🔹 launch
  Ⓜ onlyOwner
  🔹 changeWallet
  🔹 creatChangeWalletRequest
  🔹 deleteChangeWalletRequest
  🔹 approveChangeWalletRequest
✓ 🔹 processChangeWalletRequest
  Ⓜ onlyOwner
✓ 🔹 register
  Ⓜ validReferralID
✓ 🔹 addAccount
  Ⓜ validReferralID
✓ 🔹 activate
  Ⓜ nonReentrant
  🔹 registerAndActivate
  🔹 addAndActivateMultipleAccounts
✓ 🔹 importClassicAccount
  Ⓜ onlyOwner
  🔹 withdraw
  🔹 upgradeToPremium
✓ 🔹 setMaxtraversalDept
  Ⓜ onlyOwner
✓ 🔹 importPart1LagacyMatrix
  Ⓜ ownerOnly
```

```
✓ 🔹 renounceOwnership
  Ⓜ onlyOwner
✓ 🔹 transferOwnership
  Ⓜ onlyOwner
```

```
🔹 transfer
🔹 approve
🔹 transferFrom
🔹 increaseAllowance
🔹 decreaseAllowance
```

Comments

- Deployer can set following state variables without any limitations
 - traversalDept
 - If it is set to 0 every function which is calling the “getAvailableUplineMatrix” will be reverted because of underflow in L707.
- Deployer can enable/disable following state variables
 - live
 - Only once to true

- Deployer can set following addresses
 - usdc
 - treasury
- Existing Modifiers
 - validReferralID
- userAddresses itself can set new wallet address

Please check if an OnlyOwner or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/TimeProvider.sol	1	————	37	37	28	3	15	————
	contracts/C250PriceOracle.sol	1	————	58	52	26	18	19	————
	contracts/c250gold.sol	1	————	918	879	693	46	434	————
	Totals	3	————	1013	968	747	67	468	————

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	C250Gold	Missing Zero Address Validation (missing-zero-check)	99 157 187	Check that the address is not zero
#2	C250Gold	State variable visibility is not set	45, 47, 48, 78	It is best practice to set the visibility of state variables explicitly
#3	C250Gold	Missing Events Arithmetic	394 812	Emit an event for critical parameter changes
#4	C250Gold	Wrong order of struct	827	Wrong struct order. "Struct" keyword should be the first and after it the struct name
#5	C250Gold	Wrong condition	884	Check the condition. There is a incomplete condition

#6	C250Gold	Passing parameter is not used	168	Contract is passing "oracle" address to C250PriceOracle but the contract has no constructor which is handling the passed parameter
#7	C250Gold	Identifier not found and wrong modifier	840	Did you mean ImportPart1MatrixOption? Change ownerOnly to onlyOwner
#8	C250Gold	Feature not enabled	841	Use "pragma abicoder v2;" to enable the feature

Informational issues

Issue	File	Type	Line	Description
#1	C250Gold	Misspelling	See description	Change following words: - approvef L253 - creatChangeWalletRequest L254 - qaulified L482 Make sure to change it everywhere else as well.
#2	All	NatSpec documentation missing	-	If you started to comment your code, also comment all other functions, variables etc.

Commented Code exist

There are some instances of code being commented out in the following files that should be removed:

File	Line	Comment
C250Gold	108-110	// classicConfigurations[1] = ClassicConfig(1, 0, 10, 25 * 1e16, 10); // classicConfigurations[2] = ClassicConfig(3, 12, 20, 25 * 1e16, 20); // classicConfigurations[3] = ClassicConfig(3, 12, 30, 28 * 1e16, 20);
C250PriceOracle	18	// (int24 tick,) = OracleLibrary.consult(pool, secondsAgo);

Recommendation

Remove the commented code, or address them properly.

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.
