Audit Updates

Initial Audit	9th February 2022
Corrected	

Contract Analysis

Critical Medium Minor Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	medium
Location	contract.sol#L1091

Description

The contract owner has the authority to stop transactions after their first transaction. For instance, if a user buys then he may not be able to sell again. The owner may take advantage of it by setting the `timeDelay` to a high number.

```
if (delayBetweenTransfer[sendAddress] > 0) {
    require(
        delayBetweenTransfer[sendAddress] <= block.timestamp,
        "You must wait a bit to make another transaction"
    );
}
delayBetweenTransfer[sendAddress] =
    block.timestamp +
    timeDelay *
    1 seconds;
```

Recommendation

The contract could embody a check for not allowing setting the timeDelay more than a reasonable amount.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

MT - Mint Tokens

Criticality	medium
Location	contract.sol#L1026

Description

The contract owner has the authority to mint tokens. The owner may take advantage of it by calling the `mint` function once every day. The function contains a mint limitation to 2% of the total supply. Even that limitation, 2% of the total supply is enough to highly inflated the token's balance.

```
function mint(address to, uint256 amount) public onlyRole(MINTER_ROLE) {
    uint256 maxDaily = totalSupply() / 20;
    require(
        maxDaily > amount,
        "You can't mint that amount of tokens"
    );
    uint256 _now = block.timestamp;
    require(
        _now > lastMintDate + 24 hours,
        "Can't generate more tokens today, try again tomorrow"
    );
    lastMintDate = _now;
    _mint(to, amount);
}
```

Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

BC - Blacklisted Contracts

Criticality	critical
Location	contract.sol#L1110

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `addToBlackList` function.

```
function addToBlackList(address[] calldata addresses)
    external
    onlyRole(BLACKLIST_ROLE)
{
    for (uint256 i; i > addresses.length; ++i) {
        isBlacklisted[addresses[i]] = true;
    }
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Critical Medium Minor

Severity	Code	Description
	L01	Public Function could be Declared External
	L02	State Variables could be Declared Constant
	L09	Dead Code Elimination
	L14	Uninitialized Variables in Local Scope

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L373,386,404,645,653,684 and 6 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
changeTimeDelay
mint
burnFrom
...
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L1008,1007,1006

Description

Constant state variables should be declared constant to save gas.

```
walletPresale
walletLiquidity
walletIDO
```

Recommendation

Add the constant attribute to state variables that never change.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L437,428,238,96,71

Description

Functions that are not used in the contract, and make the code's size bigger.

```
toString
toHexString
_msgData
...
```

Recommendation

Remove unused functions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L1114

Description

The are variables that are defined in the local scope and are not initialized.

```
i
```

Recommendation

All the local scoped variables should be initialized.

Summary

The Smart Contract analysis reported some issues. There are some functions that can be abused by the owner, like minting tokens and massively blacklisting contracts. The contract could operate as a honeypot if the configuration is abused by the contract owner. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
