Contract Review

Contract Name	BCTOKEN
Compiler Version	v0.8.12+commit.f00d7308
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0x5f17159f0e48115d7339c519411cf40857fd067a
Symbol	BCSC
Decimals	9
Total Supply	23,000,000
Domain	bcwallet.app

Source Files

Filename	SHA256
contract.sol	befd899e5a8e9bd6e8f88514edb5fb39c8da76ded836fe3d4f8e0091fa05d57b

Audit Updates

Initial Audit	30th October 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor / Informative ● Pass

Severity	Code	Description	Status
●	ST	Stops Transactions	Unresolved
●	OCTD	Transfers Contract's Tokens	Passed
●	OTUT	Transfers User's Tokens	Unresolved
●	ELFM	Exceeds Fees Limit	Passed
●	ULTW	Transfers Liquidity to Team Wallet	Passed
●	MT	Mints Tokens	Passed
●	BT	Burns Tokens	Passed
●	BC	Blacklists Addresses	Passed

ST - Stops Transactions

Criticality	minor / informative
Location	contract.sol#L355,374
Status	Unresolved

Description

The contract owner has the authority to stop the transactions for all users excluding the owner. The owner may take advantage of it by setting the `tradingOpen` to true without setting the `launchMode` to false.

```
if(!authorizations[sender] && !authorizations[recipient]){  
    require(tradingOpen,"Trading not open yet");  
}
```

The contract can also stop the sales and transfers by setting the total fees to be equal to the burn fees.

Recommendation

The contract should not allow the contract owner to enable the `tradingOpen` variable after the initial toggle.

Read more about the [Zero Division issue](#).

OTUT - Transfers User's Tokens

Criticality	critical
Location	contract.sol#L515
Status	Unresolved

Description

Any user has the authority to transfer the balance of a user's contract to other addresses. The user may take advantage of it by calling the `multiTransfer` function before the `launchMode` toggle to false.

```
function multiTransfer(address from, address[] calldata addresses, uint256[] calldata tokens) external authorized {
    if(msg.sender != from){
        require(launchMode,"Cannot execute this after launch is done");
    }

    require(addresses.length < 501,"GAS Error: max limit is 500 addresses");
    require(addresses.length == tokens.length,"Mismatch between address and token count");

    uint256 SCCC = 0;

    for(uint i=0; i < addresses.length; i++){
        SCCC = SCCC + tokens[i];
    }

    require(balanceOf[from] >= SCCC, "Not enough tokens in wallet");

    for(uint i=0; i < addresses.length; i++){
        1(from,addresses[i],tokens[i]);
    }
}
```

Recommendation

The contract should not allow arbitrary tokens transfers.

Contract Diagnostics

● Critical ● Medium ● Minor / Informative

Severity	Code	Description	Status
●	ZD	Zero Division	Unresolved
●	L04	Conformance to Solidity Naming Conventions	Unresolved
●	L07	Missing Events Arithmetic	Unresolved
●	L13	Divide before Multiply Operation	Unresolved

ZD - Zero Division

Criticality	critical
Location	contract.sol#L374
Status	Unresolved

Description

The contract is using variables that may be set to zero as denominators. This may happen by setting the totalFee to zero or by setting the totalFee to equal the burnFee. As a result, the transactions will revert. This functionality is triggered during a sale or transfer transaction. Hence, the contract may prevent the users from selling.

```
uint256 totalETHFee = totalFee - burnFee;  
  
uint256 amountToLiquify = (swapThreshold * liquidityFee)/(totalETHFee * 2);
```

Recommendation

The contract should prevent those variables to be set to zero or should not allow to execute the corresponding statements.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor / informative
Location	contract.sol#L483,162,148,175,497,540,118,256,463,444,436,471,549,262,109,548,156,550,546,428,355,552,541,539,506,452,363,551,544,158,159
Status	Unresolved

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_teamFeeReceiver  
_allowances  
WBNB  
feeDenominator  
_amount  
Wallet_txExempt  
WETH  
maxWallPercent_base1000  
_trans  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

L07 - Missing Events Arithmetic

Criticality	minor / informative
Location	contract.sol#L471,463
Status	Unresolved

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
liquidityFee = _liquidityFee  
sellMultiplier = _sell
```

Recommendation

Emit an event for critical parameter changes.

L13 - Divide before Multiply Operation

Criticality	minor / informative
Location	contract.sol#L300
Status	Unresolved

Description

Performing divisions before multiplications may cause lose of prediction.

```
feeAmount = amount.mul(totalFee).mul(multiplier).div(feeDenominator * 100)
```

Recommendation

The multiplications should be prior to the divisions.

The domain was created 4 months before the creation of the audit. It will expire in 8 months.

There is no public billing information, the creator is protected by the privacy settings.

Summary

There are some functions that can be abused by the owner like stopping transactions and transferring the user's tokens. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 10% in buys, 20% on sales and 10% on transfer fees.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
