Contract Review

Contract Name	DNDToken
Compiler Version	v0.8.6+commit.11564f7e
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0x0aeFAc5dcfB401FFF88ff904fD2B8Ab227341B4c
Symbol	DND
Decimals	18
Total Supply	10,000,000
Source	contract.sol
Domain	dndgamefi.com

Audit Updates

Initial Audit	1st February 2022
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ELFM - Exceed Limit Fees Manipulation

Criticality	minor
Location	contract.sol#L1220

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by setting the `triggerDumpProtectionAmount` to a low value.

The contract has a total of 20% fees allowed by default, but when the amount to be transferred exceeds the anti-dump amount it will tax the user with an extra 10% fee summing up to a total of 30% fees.

```
if (dumpProtectionEnabled && amount >= triggerDumpProtectionAmount) {  
    poolFeeAmount = poolFeeAmount.add(amount.mul(10).div(100));  
}
```

Recommendation

The contract could embody a check for a minimum acceptable value of the `triggerDumpProtectionAmount` to not allow the Owner to set it too low.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L1

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `setBlackList` function.

```
function setBlackList(address account, bool value) public onlyOwner {  
    isBlackListed[account] = value;  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination
●	L07	Missing Events Arithmetic

L01 - Public Function could be Declared External

Criticality

minor

Location

contract.sol#L1267,L1261,L1257 and 21 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
bindReferrer  
changeReferrer  
setSwapAtTokenAmount  
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L34

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

WETH

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L853,L865,L894 and 8 more

Description

Functions that are not used in the contract, and make the code's size bigger.

```
trySub  
tryMul  
tryMod  
...
```

Recommendation

Remove unused functions.

L07 - Missing Events Arithmetic

Criticality

minor

Location

contract.sol#L1257,L1245

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
swapAtTokenAmount = amount  
triggerDumpProtectionAmount = value
```

Recommendation

Emit an event for critical parameter changes.

Summary

DND claims to be an action-adventure sandbox game released on BSC network. The Project has a friendly and growing community. The Smart Contract analysis reported no compiler errors and only 2 issues. There are some functions that can be abused by the owner, like changing fees up to 30% and blacklisting wallets from selling. The contract has a passive anti-bot mechanism to punish snipers as well. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Coinscope

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Coinscope is aiming to make crypto discoverable and efficient globally. It provides all the essential tools to assist users draw their own conclusions.
