Website Report

- Performance
- Best Practices
- Accessibility
- SEO ranking

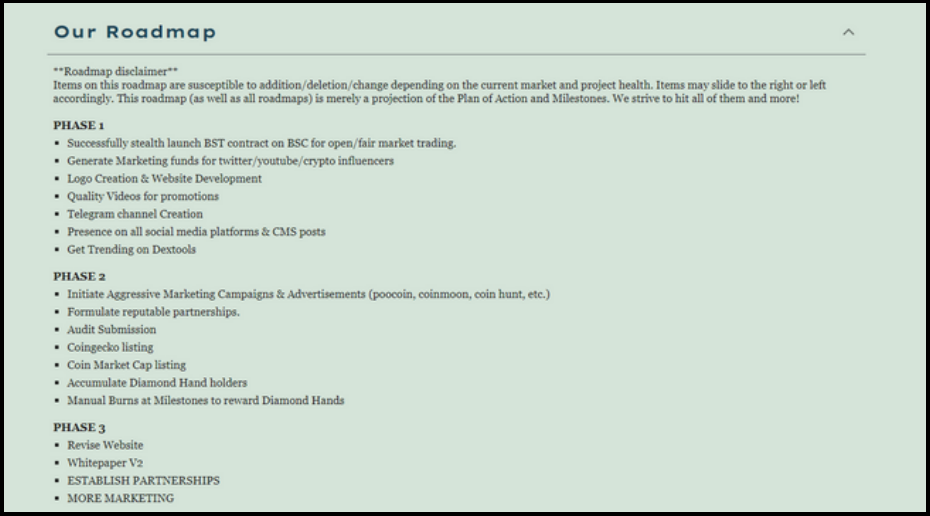

The only minor issues found are:

- Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption.
- Properly size images. Serve images that are appropriately-sized to save cellular data and improve load time.

This is not a blocker as many project owners will prefer to hide their identities and decide to come forward later.

B$T is a medium risk project, with a small community and a very interesting Rewarding ecosystem. The smart contract analysis showed no warnings or errors but there is a freeze sell function and a blacklist address function. Some project owners use this functionality to avoid being sniped from bots on their launch, but on the other hand it can serve as a way to prevent holders from selling in the future. This risk can be eliminated by renouncing ownership. The team was not found or mentioned in the website. Hosting an AMA or doxxing the team is highly advised to provide more confidence and trust to the community.
