Audit Updates

Initial Audit	18th July 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	critical
Location	contract.sol#L912

Description

The contract owner has the authority to stop the sales for all users excluding the owner. The owner may take advantage of it by setting the `sellTaxes` to high values. As a result, the user's balance will not be sufficient, the expression will overflow and the transaction will revert.

```
} else if(to == address(uniswapV2Pair)) {  
    tax += baseUnit * sellTaxes["marketing"];  
    tax += baseUnit * sellTaxes["dev"];  
    tax += baseUnit * sellTaxes["liquidity"];  
    tax += baseUnit * sellTaxes["charity"];  
  
    if(tax > 0) {  
        _transfer(from, address(this), tax);  
    }  
}
```

Recommendation

Read more in the fees [manipulation section](#).

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ELFM - Exceed Limit Fees Manipulation

Criticality	critical
Location	contract.sol#L1

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setSellTax` function with a high percentage value.

```
function setSellTax(uint256 dev, uint256 marketing, uint256 liquidity, uint256 charity) public onlyOwner {  
  
    sellTaxes["dev"] = dev;  
    sellTaxes["marketing"] = marketing;  
    sellTaxes["liquidity"] = liquidity;  
    sellTaxes["charity"] = charity;  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L1002

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `enableBlacklist` function.

```
require(!isBlacklisted(msg.sender), "CoinToken: sender blacklisted");  
require(!isBlacklisted(recipient), "CoinToken: recipient blacklisted");  
require(!isBlacklisted(tx.origin), "CoinToken: sender blacklisted");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	CO	Code Optimization
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L05	Unused State Variable
●	L13	Divide before Multiply Operation
●	L14	Uninitialized Variables in Local Scope

CO - Code Optimization

Criticality	minor
Location	contract.sol#L891

Description

The sellPath configuration is defined in every transaction but it is used only when the contract balance is sufficient for swap. This produces unnecessary gas.

```
address[] memory sellPath = new address[](2);  
sellPath[0] = address(this);  
sellPath[1] = uniswapV2Router02.WETH();
```

Recommendation

The sellPath configuration could be moved to the statements of the swap branch.

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L177,185,202,209,216,228,236,247,265,293,312,518,526,1016,1023,1031,1039,1046,1054,1070,1108,1116

Description

Public functions that are never called by the contract should be declared external to save gas.

```
disableTax  
enableTax  
removeExclude  
disableBlacklist  
enableBlacklist  
burn  
unpause  
pause  
triggerTax  
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L838,843,848,831,835,840,845,837,842,847,836,841,846,833

Description

Constant state variables should be declared constant to save gas.

```
swapThreshold  
marketingTaxWallet  
marketingTaxSell  
marketingTaxBuy  
liquidityTaxWallet  
liquidityTaxSell  
liquidityTaxBuy  
devTaxWallet  
devTaxSell  
...
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality

minor

Location

contract.sol#L638,639,656,692

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
WETH  
MINIMUM_LIQUIDITY  
PERMIT_TYPEHASH  
DOMAIN_SEPARATOR
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>.

L05 - Unused State Variable

Criticality	minor
Location	contract.sol#L835,836,837,838,840,841,842,843,845,846,847,848

Description

There are segments that contain unused state variables.

```
charityTaxWallet  
liquidityTaxWallet  
marketingTaxWallet  
devTaxWallet  
charityTaxSell  
liquidityTaxSell  
marketingTaxSell  
devTaxSell  
charityTaxBuy  
...
```

Recommendation

Remove unused state variables.

L13 - Divide before Multiply Operation

Criticality

minor

Location

contract.sol#L890

Description

Performing divisions before multiplications may cause lose of prediction.

```
charityETH = (ethGained * ((charityTokens * 10 ** 18) / taxSum)) / 10 ** 18
devETH = (ethGained * ((devTokens * 10 ** 18) / taxSum)) / 10 ** 18
marketingETH = (ethGained * ((marketingTokens * 10 ** 18) / taxSum)) / 10 ** 18
liquidityETH = (ethGained * ((liquidityTokens / 2 * 10 ** 18) / taxSum)) / 10 ** 18
baseUnit = amount / denominator
...
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality

minor

Location

contract.sol#L896

Description

There are variables that are defined in the local scope and are not initialized.

```
tax
```

Recommendation

All the local scoped variables should be initialized.

The domain has been created in 11 months before the creation of the audit.

There is no public billing information, the creator is protected by the privacy settings.

Summary

There are some functions that can be abused by the owner like stopping transactions, manipulating fees and blacklisting addresses. The contract can be converted into a honeypot and prevent users from selling if the owner abuses the admin functions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
