The only minor issues found are:

- Use video formats for animated content. Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes.
- Properly size images. Serve images that are appropriately-sized to save mobile data and improve load time

Your Score

METABTC is a medium risk project. The smart contract analysis showed 2 major issues. The Owner can change fees without any limitation, and disturb the users's trades. Finally there is an "airdrop" function that takes the tokens of any address and redistributes them to a list of other wallets. The team was not found or mentioned anywhere. Renouncing contract ownership will eliminate all contract threats and issues.
