Contract Review

Contract Name	Justice
Compiler Version	v0.8.7+commit.e28d00a7
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0xFFDCCACB0aD5f9FEFd c99870EB6Ac73A4c714842
Symbol	JUSTICE
Decimals	9
Total Supply	100,000,000
Domain	justiceproject.io

Source Files

Filename	SHA256
Justice Token AntiBot.sol	db91dd3cfe1b019585c75d24032913b07c8703ccd7962c5769215ade086cda26
justicetoken-importsV2.sol	eceeba5278ba8cdaae256e51e86a259014e9271b669670fdb6fc779ca22e1e2

Audit Updates

Initial Audit	12th April 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	CO	Code Optimization
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L08	Tautology or Contradiction
●	L09	Dead Code Elimination
●	L13	Divide before Multiply Operation
●	L15	Local Scope Variable Shadowing

CO - Code Optimization

Criticality

minor

Location

contract.sol#L61, 475

Description

There are code segments that could be optimized. A segment may be optimized so that it becomes a smaller size, consumes less memory, executes more rapidly, or performs fewer operations.

```
uint256 internal constant maxWalletBalance = 0;
```

```
if ( maxWalletBalance > 0 && !_isUnlimitedSender(sender) &&
    !_isUnlimitedRecipient(recipient) && !_isV2Pair(recipient) ){
    uint256 recipientBalance = balanceOf(recipient);
    require(recipientBalance + amount <= maxWalletBalance, "New
balance would exceed the maxWalletBalance");
}
```

Also, the contract is calling `_takeFee` through `_takeFeeToEth`.

```
function _takeFeeToETH(uint256 amount, uint256 currentRate, uint256 fee,
address recipient, uint256 index) private {
    _takeFee(amount, currentRate, fee, recipient, index);
}
```

Recommendation

Rewrite some code segments so the runtime will be more performant.

L01 - Public Function could be Declared External

Criticality	minor
Location	Justice Token AntiBot.sol#L344,349,409 justicetoken-importsV2.sol#L104,108,113,116,122

Description

Public functions that are never called by the contract should be declared external to save gas.

```
unlock  
lock  
getUnlockTime  
transferOwnership  
renounceOwnership  
isExcludedFromFee  
decreaseAllowance  
increaseAllowance
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

Criticality

minor

Location

Justice Token AntiBot.sol#L615,617,619,121,119,120,116

Description

Constant state variables should be declared constant to save gas.

```
burnAddress  
Staking  
Gameplay  
Development  
_testnetRouterAddress  
_mainnetRouterV2Address  
_mainnetRouterV1Address
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	Justice Token AntiBot.sol#L37,61,75,119,120,121,332,421,201,202 and 5 more justicetoken-importsV2.sol#L153

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the mixed_case match for private variables and unused parameters.

```
WETH
_pair
_router
_isExcludedFromRewards
_isExcludedFromFee
_allowances
_balances
_reflectedBalances
_enable
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L08 - Tautology or Contradiction

Criticality

minor

Location

Justice Token AntiBot.sol#L169

Description

Detects expressions that are tautologies or contradictions. For instance, an uint variable will always be greater than or equal to zero.

```
require(bool,string)(index >= 0 && index < fees.length,FeesSettings._getFeeStruct: Fee index out of bounds)
```

Recommendation

Fix the incorrect comparison by changing the value type or the comparison.

L09 - Dead Code Elimination

Criticality

minor

Location

justicetoken-importsV2.sol#L76,51,52,53,54,68,71,60,63,46 and 1 more

Justice Token AntiBot.sol#L565,575,580,602,808,142,147,183

Description

Functions that are not used in the contract, and make the code's size bigger.

```
getCollectedFeeTotal  
_addFees  
_addFee  
_approveDelegate  
_takeTransactionFees  
_isV2Pair  
_getSumOfFees  
_beforeTokenTransfer  
sendValue  
...
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality

minor

Location

Justice Token AntiBot.sol#L527,591,905,913

Description

Performing divisions before multiplications may cause lose of prediction.

```
tAmount = amount.mul(fee).div(FEES_DIVISOR)
tBurn = amount.mul(fee).div(FEES_DIVISOR)
tFee = amount.mul(fee).div(FEES_DIVISOR)
tTotalFees = tAmount.mul(feesSum).div(FEES_DIVISOR)
```

Recommendation

The multiplications should be prior to the divisions.

L15 - Local Scope Variable Shadowing

Criticality

minor

Location

Justice Token AntiBot.sol#L499,521,839,883

Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
name
_env
sumOfFees
```

Recommendation

The local variables should have different names from the upper scoped variables.

Contract Functions

Contract	Type	Bases

Summary

Justice is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 25% fees.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
